

Transmit Security Named a **'Leader'** in Forrester Wave : Customer Identity & Access Management (CIAM) Solutions, Q4 2024

Forrester evaluated and ranked 15 qualified CIAM vendors. In their report, Transmit Security received maximum possible scores in 10 criteria.

FORRESTER®

**WAVE
LEADER 2024**

Customer Identity And
Access Management
Solutions

Mosaic by Transmit Security

Mosaic is the only CIAM platform with native fraud prevention and identity verification — built from the ground up around orchestration and AI.

Why Transmit Security ranks as a 'Leader'

Transmit Security received the highest scores possible (5/5) in 10 criteria. Here's our reasoning on how we earned five of those:

- 1. Data orchestration** - We invented identity orchestration as a unifying framework and decisioning engine at the core of our identity platform.
- 2. Identity verification** - We offer the only threat-aware identity verification that examines the full context of a user's identity, behavior and devices.
- 3. Risk-based authentication (RBA)** - As the only risk-native authentication solution, it enables dynamic RBA that seamlessly adapts to risk and trust.
- 4. Reporting & dashboarding** - Our industry-first GenAI analytics tool enables you to query your own data to gain instant insights, graphs and charts that display risk and trust events, attack patterns and more.
- 5. Scale** - Unlike cloud-migrated IAM solutions repurposed for customers, our cloud-native CIAM services provide the endless scale needed to support hundreds of millions of customers.

Transmit Security received above-average customer feedback.

Forrester's evaluation of Transmit Security

Forrester determined vendor rankings based on the strength of strategy, current offering capabilities & customer feedback.

- **Strategy:** "Transmit Security's vision and roadmap is ahead in fraud management and identity verification. The vendor's technical roadmap is feature-rich, and roadmap execution is strong."
- **Capabilities:** "Identity source connectivity and data orchestration are powerful. Transmit Security's internally developed identity verification is fully integrated into CIAM workflows."
- **Customer feedback:** "Customers praised Transmit Security's competence and dependability."
- **Forrester's take:** "[Mosaic by Transmit Security] is a good fit for firms that prefer an integrated, end-to-end CIAM solution for their identity and cyber fraud orchestration."¹

Transmit Security Received Highest Possible Scores in 10 Criteria:

1. Data orchestration
2. Customer identity verification and registration
3. Risk-based authentication
4. Reporting & dashboarding
5. Scale
6. Business systems integration policy management
7. Vision
8. Roadmap
9. Partner ecosystem
10. Community

Buyers should look for CIAM that:

1. Uses generative AI as a copilot for CIAM policy creation
2. Offers rich reporting & dashboarding
3. Provides a visual workflow designer, making it easy to modify journeys
4. Play a vital role as an orchestration and identity integration hub

End-to-end identity security

By unifying CIAM & fraud prevention, our platform extends beyond the scope of the CIAM Wave.

This distinction is important to us as Forrester analyzed third-party "fraud management integration," not fraud prevention itself.

"Transmit Security's vision and roadmap is ahead in fraud management and identity verification."
